

Accessibility Build Checklist

CODTECH UI/UX Design Internship – Task 4

Name: Poornima Gogulapati

Introduction

Accessibility in UI/UX design ensures that digital products can be used by all users, including people with disabilities. This checklist helps evaluate whether a mobile shopping application follows essential accessibility standards.

Objective

To assess the accessibility of a mobile shopping application and verify compliance with basic usability and accessibility requirements.

Accessibility Checklist

Requirement	Status
Color contrast is sufficient	✓ Pass
Font size is readable	✓ Pass
Images include alt text	✓ Pass
Buttons have clear labels	✓ Pass
Form fields are properly labeled	✓ Pass
Keyboard navigation is supported	✓ Pass
Focus indicators are visible	✓ Pass
Error messages are understandable	✓ Pass
Screen reader compatibility	✓ Pass
Touch targets are adequately sized	✓ Pass
Proper heading structure	✓ Pass
Responsive design support	✓ Pass

Findings

The application meets key accessibility requirements. Text is readable, navigation is user-friendly, and interactive elements are clearly labeled. Support for screen readers and keyboard navigation improves usability for all users.

Recommendations

- Follow WCAG accessibility guidelines.
- Maintain proper color contrast.
- Provide alt text for all images.
- Conduct regular accessibility testing.

Conclusion

The accessibility review confirms that the application follows essential accessibility standards and provides an inclusive user experience for a wide range of users.
